

MAPS WITH TEETH

Continuity Infrastructure for Institutional Survivor Navigation

EXECUTIVE BRIEF · INSTITUTIONAL RISK ARCHITECTURE & FOUNDING PILOT

STAGE LOCKED · V1.0.0

Target Raise: \$100,000 (Philanthropic Grant)
Runway / Scope: 6 Months · 90-Day Pilot Cohort
Fiscal Sponsor: Seeking 501(c)(3) Partner

CORE INSTITUTIONAL THESIS

Survivors do not drop out because their cases lack substance. They drop out because institutional friction, repeated retelling, lost paper trails, and unrecorded gatekeeper refusals inflict compounded trauma before formal adjudication ever begins. Maps With Teeth provides immutable, participant-held continuity infrastructure that turns fragmented institutional dead-ends into auditable, accountable records.

THE SYSTEM LOOP

Institutional Navigation Realities

CURRENT FRAGMENTED REALITY	WITH MAPS WITH TEETH
Forced Repetition: Survivors retell trauma 5–11 times across unlinked legal and advocacy silos.	Single Digital Bridge: Client-side cryptographic intake shared securely under participant-controlled consent.
Untracked Turnaways: Verbal referrals and desk rejections evaporate with zero record of contact.	Continuity Contact Record: Standardized, timestamped contact artifact created regardless of agency cooperation.
Agency Liability Panic: Institutions refuse receipts fearing admission of liability or evidence certification.	Strict Non-Implication: 5 statutory disclaimers legally decouple proof of contact from merits or liability.
Opaque Routing: Dead-end referrals remain hidden; next survivors sent down the exact same hostile routes.	Resource Graph & Bad Maps: Institutional friction and refusal patterns surface to guide survivors away from dead ends.

THE PILOT QUESTION

Controlled 90-Day Cohort Hypothesis

Hypothesis: Equipping 25 survivors with standardized, non-implicative Continuity Contact Records will reduce early-stage institutional drop-off by >50% compared to historical baselines, while generating zero defamation or liability exposure for receiving agencies.

FUNDING ALLOCATION

\$100,000 Canonical Founding Budget (6 Mo)

BUDGET CATEGORY / ALLOCATION FOCUS	AMOUNT
1. Founder / Project Director	\$36,000
2. Employer payroll / benefits reserve	\$5,000
3. Part-time survivor-services expertise	\$8,000
4. Fiscal sponsorship / administration	\$8,000
5. Organizer technology + security	\$10,000
6. Legal / privacy / insurance / compliance	\$10,000
7. Gap Fund	\$10,000
8. Evaluation + data systems	\$5,000
9. Partner training + outreach	\$3,000
10. Operating contingency	\$5,000
Total Founding Funding Requirement	\$100,000

THE CORE ARCHITECTURE

Three Foundational Pillars

1. The Bridge (Zero-Knowledge Intake) Survivor-held, privacy-first intake protocol. Structured disclosures are encrypted in-browser, preventing unauthorized institutional indexing while maintaining granular survivor consent across referrals.	Client-Side Cryptography
2. Continuity Contact Record Generates a formal, immutable touchpoint artifact documenting date, actor, and handling status across 3 verification tiers: <i>Participant-Recorded</i> , <i>Agency-Acknowledged</i> , and <i>Partner-Role-Verified</i> .	Standardized Contact Spec
3. Living Resource Graph & Bad Maps Aggregates verified routing pathways while systematically flagging "Bad Maps"—institutional bottlenecks, unlawful intake requirements, and broken referral loops.	Accountability Intelligence

"Agency acknowledgment strengthens a record but is never required for the participant to create, own, preserve, and carry the record forward."
CORE INVARIANT — CONTINUITY CONTACT RECORD ARCHITECTURE SPEC §1.2

PROOF VS. PILOT

Production Baseline vs. Deployment Scope

BUILT & VERIFIED IN CODE (TODAY)	PILOT DEPLOYMENT SCOPE (90 DAYS)
Domain Engine: Complete TypeScript architecture with append-only hash chains and strict attribution.	Cohort Execution: Controlled deployment supporting 25 participants across partner agencies.
15 Invariant Test Suite: Automated verification proving non-implication, de-judicialization, and zero agency veto.	Field Verification: On-the-ground validation of agency reception and participant retention across real touchpoints.
Cryptographic Export: Client-side PDF/JSON generation with Texas UETA / E-SIGN compliant notices.	Independent Evaluation: Objective measurement of dropout reduction and survivor agency metrics.

MEASUREMENT FRAMEWORK

7 Quantifiable Pilot Success Metrics

1. First-Touch Dropoff < 20% vs. ~65% baseline	2. Record Generation 100% visits recorded
3. Agency Engagement > 35% voluntary ack rate	4. Retelling Count > 50% drop in trauma retelling
5. Handoff Resolution < 72 hrs median routing conf.	6. Legal Safety 0 liability claims incurred
7. Survivor Self-Efficacy & Agency Score > 85% report heightened institutional leverage & clarity	

BUILT TO DOCUMENT CONTACT — NOT ADJUDICATE CASES

Continuity Contact Records document objective contact timestamps, actor identities, and handling statuses. They make no claims regarding evidence authenticity, substantive merit, or agency liability. All records remain survivor-held property under strict client-side encryption.
